

# **Training Program on how to evacuate a vehicle that has been involved in an accident**

**Learn how to organise the evacuation of passengers after a road accident in optimum safety conditions, regardless of the bus' position.**

## **Goals**

Learn how to get out of a public transport vehicle that has been involved in a road accident, in optimum safety conditions, until the emergency services arrive.

## **Evacuation theoretical content**

- Accident statistics for public transport vehicles
- Characteristics of these accidents
- Specific risks
- Difficulties linked to evacuating a vehicle on its side

## **Evacuation practical content**

Simulations according to the following cases:

- Vehicle on its wheels
- Vehicle on its side
- Vehicle on fire
- Presence of casualties and people with reduced mobility

## **Ultra-realistic simulations due to the use of:**

- Latest generation manikins (25 - 50 - 70 kg)
- A smoke generator
- An accident visual and sound simulation device (STRESSIT system)
